NPT Male

**2 x Phillips Head
Screws**
#8 x 1 3/4"

Right Weigh is committed to making the warranty process as painless as possible for our valued customers. To help ease the burden of replacing a faulty gauge or valve, we offer this kit which allows easy replacement of both without the need for removing the plastic enclosure from the vehicle. Please follow these simple steps.

1 Disconnect the air line and remove the brass fitting from the bottom of the enclosure.

2 Remove the 2 Phillips head screws that are on the valve. The gauge and valve can now be removed from the box by pulling outward.

3 Place the new gauge and valve in the box and screw the new brass fitting into the bottom of the valve but **do not completely tighten yet**.

4 Install the 2 Phillips head screws and tighten them down until snug.

5 Tighten the lower brass fitting until it contacts the plastic box, and then reconnect the air line.

Thank you for choosing to drive more and scale less! Here at Right Weigh, we are committed to making our products simple to install and easy to use. We understand that installation can vary between vehicles and yours may not be described in this manual. In any event, our technical support team is ready to answer your questions!

IMPORTANT!

Please read instructions **COMPLETELY** and thoroughly before installation. Right Weigh, Inc. is not responsible or liable for product failure or vehicle damage due to improper installation. The installation requirements are outlined in this manual and should be followed thoroughly to avoid inaccuracy or damage to the product.

It is also important to be aware of vehicle manufacturer policies before making modifications to the vehicle. Right Weigh, Inc. is not liable or responsible for issues regarding warranties with other manufacturers. This is the responsibility of the customer. If you are unsure about how these installation practices apply to your vehicle, please contact your vehicle or component manufacturer.
